D) LINEE DI RICERCA

Analytical and biological characterization of extracts and isolated compounds from medicinal plants.

Evaluation of the estrogenic activity of plants extracts used in traditional medicines for women's health to prevent menopausal symptoms using ovariectomy (OVX) and ovariectomy with phytoestrogen replacement in female rats to mimic postmenopausal changes. The effects of estrogen deprivation are tested on bone loss, skin changes, memory and neuronal loss. Cell culture models are used to evaluate whether phytoestrogenic treatment increases the survival of neurons when exposed to a variety of insults.
